Installation on IOS / Apple-PC

The software is written for MS-Windows. For an installation on IOS-PC there are some tools available:

- Wine Bottler (free)
- Virtual Box (free)
- VMware Workstation Pro (30 day test version)
- Citrix XenApp (90 day test version)
- Parallels Desktop (to buy)
- IOS X contains Boot Camp for this purpose

Du to recurrent problems especially with newer IOS devices we strongly recommend the usage of a windows-pc.
